## Bringing together local and regional governments and stakeholders to address policy issues around the advent of Autonomous Vehicle (AV) technology

AV technology brings the potential to positively affect transportation systems while simultaneously making great progress providing greater access to opportunity. It can reduce greenhouse gases, congestion, and cost of travel for all users. Integrating AVs into our transportation network can also foster and grow vibrant public spaces, improve safety, and foster healthier and more livable communities.

These outcomes all depend on carefully implemented public policy. With so much at stake, communities need to prepare for this future. This conference will provide information, discussion, and insight into policy needs and opportunities, including:

An Overview of AV Planning and Policy Issues

Transportation as a Service and Transit Services

Local Issues  
Land-Use Planning  
Curb Management  
Parking Codes  
Fiscal Issues
