SNOW PLOWING POLICY

When directed by the Street Supervisor, Public Works Manager, Public Works Director, or the City Manager:

1. Begin plowing when snow is predicted to reach a depth that may impede emergency vehicles. We will begin when snow reaches 2 - 3 inches and the forecast is for continued snow.

We will start all plowing operations when we reach our specified parameters. All snow events will have the same starting procedures, but all snow events will not have same finishing procedures. Complete rounds will be determined by weather.

2. Plow priority routes to keep arterials and emergency service routes open. Starting with Priority Route #2 West Side and Priority Route #3 East Side. Schedules and shifts will be adjusted to establish 12-hour shifts around the clock (6:00 to 6:00 shifts). Priority Route #1 and Parking lots will be plowed during night shift. 7 Plows, 3 Loaders and 2 Salters will be running during both shifts. 12 Employees will be needed for each shift.

Both shifts will consist of 8 Street workers and 4 Water/Parks workers. It will take about 3 days to complete one round through the city provided snow stops and crews do not have to return to Priority Routes.

3. Proactive Salting/De-Icing: We will apply material on designated arterial routes (See Attached Map)) prior to an event. This application will be monitored during snow removal to evaluate its effectiveness. Throughout the season we will also compare Salt vs. De-Icer applications to compare life cycle, and cost. We currently have three chemical applicators and four salters. We will apply chemical De-Icer during day shift prior to event. Salters will be scheduled to start at 2:00am to complete routes before schools and the start of the business day.

Salting Routes

- Priority Route #1
- Priority Route #2
- North Route
- South Route
